Zimbra Suite Plus

A new era has begun

Table of Contents

zimbra SUITE+
powered by ZEXTRAS

Made to expand your Zimbra server's capabilities

One module for each need.
Zimbra Suite Plus is the modular add-on that allows you to extend your Zimbra server's capabilities in ways you want, such as real-time hot backup and restore or mobile push synchronization. Buy what you need, when you need it, the way you need it, at a convenient price and through a flexible licensing system.

Zimbra Suite Plus and its modules are managed through the dedicated Administration Zimlet, which is integrated with the Zimbra Administration Console.

An unbelievable
Zimbra experience
at a remarkably competitive price

Certified for:
Zimbra Network Edition Pro
Zimbra Network Edition Standard
Zimbra Open Source Edition

Supports Zimbra 8.6.0 and higher

zimbra
BACKUP+
powered by ZEXTRAS

The one and only real-time backup for Zimbra, designed for your needs

Backup Plus is a complete backup and restore solution for Zimbra. Featuring a cutting-edge, real-time engine, it takes care of backing up every single item and event in your server, with split second precision.
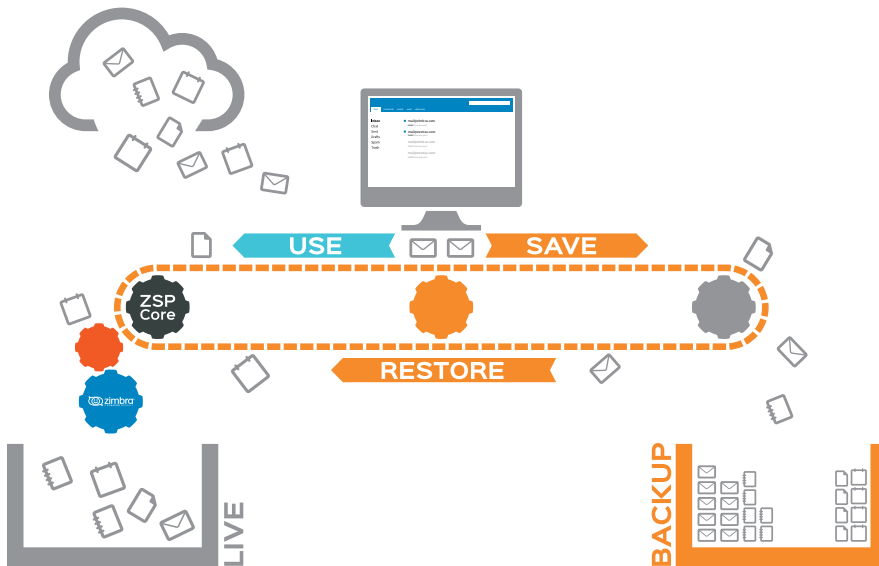

It's specifically designed to avoid any data loss by using atomic and ever-consistent algorithms, while still saving a lot of disk space thanks to an intelligent deduplication and compression system.

Backup Plus features several restore options, ranging from a single-item restore to complete disaster recovery. All of the restore modes are transparent to the end-user and are 100% OS, architecture and version independent: you can restore data on any supported Zimbra version regardless of the version of the source server.
Backup Plus also allows you to take a complete snapshot of the mail system and to store it anywhere.

Its complete automation and seamless integration with the Zimbra Administration Console makes Backup Plus the perfect choice for those who want to safeguard their data in the safest and easiest way.

Real-time backup
Backup any change in the system as soon as it happens. No more data loss caused by backup scheduling issues or because your server crashed at the wrong moment.

Easy to use
Backup Plus features a one-click initialization process and allows you to easily manage all the backup options, including coherency checks and safety measures, through the Administration Zimlet.

100% transparent to the user
User mailboxes will always be available for use, and all restore modes are designed to be completely transparent in order to reduce the impact on the user.

Six restore modes

External restore
Restore all data and settings or run a provisioning import from either a Backup Plus live dataset or from an External Backup.

Item restore
Restore a single item within a mailbox by its Item ID.

Restore as a new account
Restore all of a mailbox's data and settings as they were in a specific moment in time into a new, hidden-from-GAL mailbox to recover items and folders.

Undelete restore
Restore any item deleted from a mailbox in a defined period of time within a dedicated folder in the very same mailbox.

Restore deleted account
Restore a deleted account as it was when it was deleted.

Restore BLOBs
Restore broken data BLOBs by cross referencing Zimbra's database and Backup Plus' data.

3

100% environment independent

Backup Plus can restore data on any operating system and architecture supported by Zimbra and does so regardless of the source and destination servers' OS, architecture and Zimbra version.

Smart storage

By using atomic write algorithms, all data saved in the backup store will always remain 100% consistent and can be moved onto storage media like tape devices and optical disks even when the backup system is running.

Quick disaster response

Backup Plus is designed to get you back on-line ASAP after a disaster. Either a live backup folder or an external backup can be used to restore, and all accounts are available within minutes while restoring the data.

Self-consistent snapshots

Over and above the real-time backup engine, Backup Plus includes an "External Backup" feature that allows you to save self-consistent snapshots of the data in the Zimbra server to be stored on a remote location or tape drive for additional safety.

COS-based backup exclusion

Exclude expendable Classes of Service and/or user accounts that you won't need to restore from the backup. This saves even more valuable disk space.

Preserve share consistency

Restoring data with Backup Plus always preserves a share's consistency, so you won't need to reconfigure your shares after a restore or disaster recovery.

Compressed backup store

Backup Plus' backup store is compressed and deduplicated. The average backup store will be 70% of the size of the current data contained in the server, making it very cost-effective.
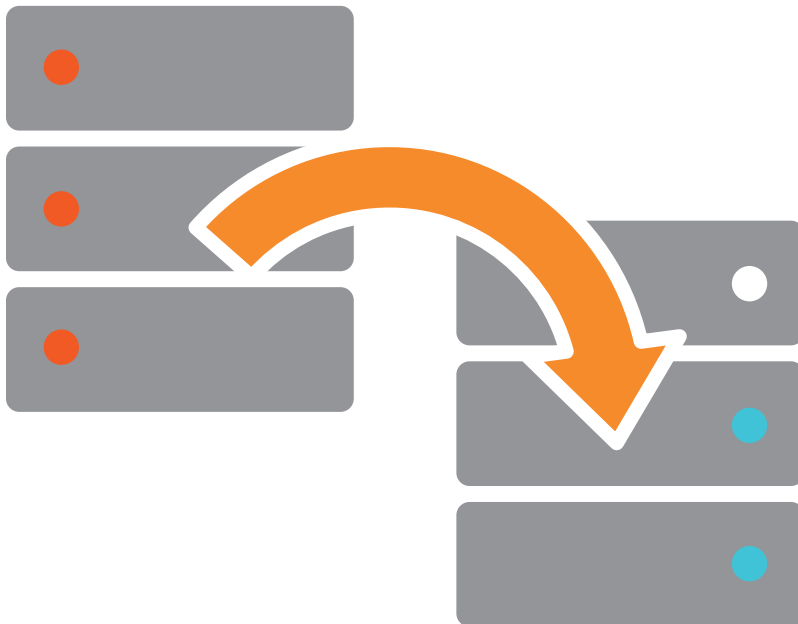

Save all, restore all

All user data, user configuration, classes of service and domains are backed up and can be restored at will.

6 restore modes

Six different restore options mean that you will always be able to recover what you need, from a single item to an entire domain.

zimbra MOBILE +

powered by ZEXTRAS

Your life at hand, always

Mobile Plus allows your users to synchronize their Zimbra mailbox
with their mobile devices through the widespread
Exchange ActiveSync protocol, which is natively supported
by the vast majority of mobile devices.
Whether it is a mobile phone or a tablet, corporate or BYOD,
your data will always be at your fingertips, without any
middle-ware or dedicated client.

Not just a mere viewing medium, but a complete communication solution
that allows you to send and receive emails, use the Global Address List,
fully manage contacts in your Zimbra address book, create appointments,
arrange meetings and manage task lists.

Mobile Plus' seamless integration with Zimbra allows for instant PUSH notifications, meaning that every new email, contact and appointment will be instantly synchronized.

Administrators can manage everything mobile-related straight from the Zimbra Administration Console thanks to the dedicated Administration Zimlet.

Exchange ActiveSync protocol

The widespread Exchange ActiveSync (EAS) protocol grants you the highest native compatibility ever. Synchronize your data with your iPhone, iPad, Android device, Nokia phone and Windows Mobile device without any client app.

Fine tuning options

While Mobile Plus does not require any configuration to be operational, a set of "fine tuning" settings are available for those administrators wanting to tweak their mobile experience on very large deployments.

No config needed

You just need to choose which users and/or Classes of Service can use the mobile synchronization features, and the module will handle the rest. Mobile Plus runs on standard web ports, so you won't have to make any firewall/network config changes either.

Synchronize your
Zimbra mailbox even with

Windows 8 | 10

**Outlook** 2013 | 2016

Synchronization control

Thanks to the dedicated Administration Zimlet, you will always be aware of the users and devices synchronizing with the server, and you have options to reset a synchronization session and to delete the whole synchronization history for a device.

Push sync of all your items

Each new item and change to existing items is instantly synchronized between your Zimbra mailbox and your device. This applies to emails, contacts, appointments and tasks alike.

Shared folder sync

Don't settle for just your personal data, synchronize everything that has been shared with you in Zimbra to your device!
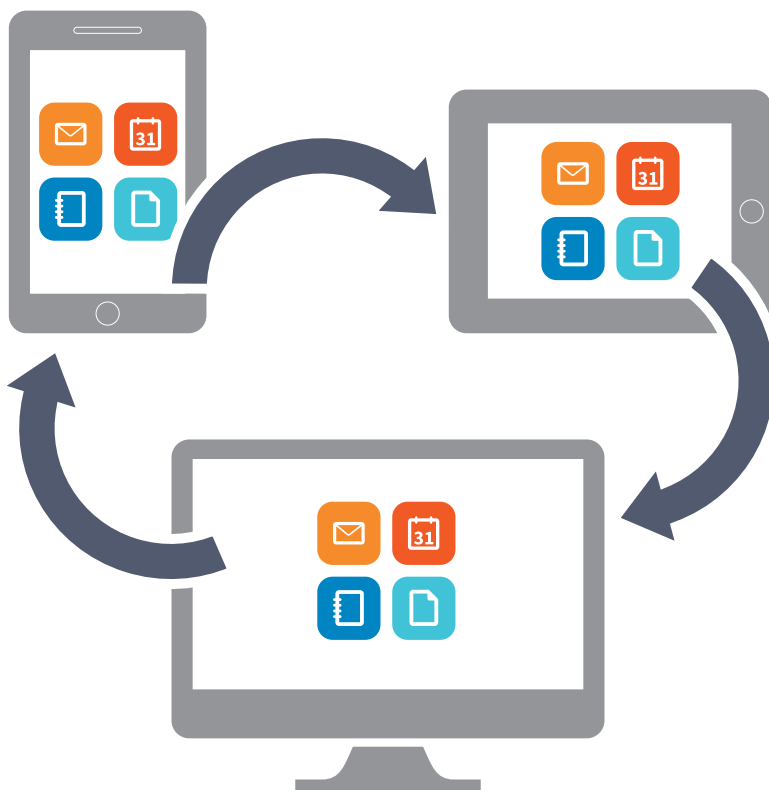

On the go meeting invitation/response

Planning meetings has never been so easy: create a new appointment on your mobile and add any participants you wish. If you receive a meeting invitation by email, you can accept or deny the request right from the email client on the device.

Dedicated logging

Mobile Plus writes to a dedicated log file that can prove invaluable for keeping track of your synchronization activities. Furthermore, the Account Logger feature allows you to easily configure a separate log file for a device/user in order to make troubleshooting easier.
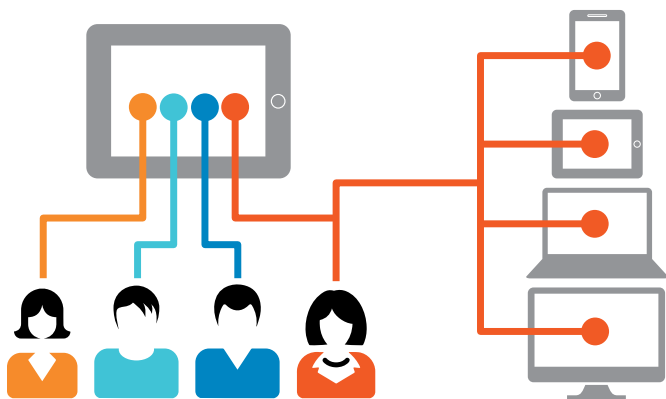

Multiple accounts per device

There is no limit to the number of accounts a single device can synchronize, and there is no limit to the number of devices that can synchronize a single account.

Mobile device management

Mobile Plus allows Global Admins to perform remote provisioning operations, such as resetting a device to factory defaults in case of theft or to force the use of an unlock code for higher security.

Hierarchical Storage Management ... and much more

Featuring advanced Zimbra store management and HSM, this module allows you to manage multiple volumes and HSM policies through the dedicated Administration Zimlet - completely integrated into your Zimbra Administration Console - giving you the tools to organize and manage your storage effectively.

Save valuable storage space thanks to customizable compression theresholds and multiple HSM policies, easily expand your Zimbra server by adding new volumes at will, improve your server performances by splitting the I/O, load onto different storage media and use different tiers of storage equipment.

HSM Plus improves your server's performance

Thanks to the flexibility HSM Plus allows, it'll be a breeze to split your current and future stored data between multiple storage media, thus improving the I/O throughtput of your server.

HSM PLUS is your swiss army knife when it comes to storage

Live storage capacity expansion

Need to expand your storage capacity? No more downtimes, no more filesystem operations, no more hassles: HSM Plus allows you to add new volumes to your Zimbra infrastructure quickly and easily.

Operation scheduling

HSM operations can be easily configured and scheduled through the dedicated Administration Zimlet, so you won't need to worry about when and what was the last operation HSM Plus executed.

Multipolicy HSM

Use the Hierarchical Storage Management technique to automatically move data between volumes according to one or more easy-to-create policies. Split your storage capacity among media of different tiers.

Storage management tools

HSM Plus' Command Line Interface provides you with a set of store maintenance tools, such as a volume-to-volume move utility and a BLOB health check.

Save valuable disk space

Item compression allows you to free up precious disk space.
This option can be easily enabled on any Zimbra store,
either new or existing, and you will experience its benefits right away

Multiple volumes

Configure and manage multiple Zimbra primary
and secondary volumes, gaining access to a whole
lot of possibilities for everything regarding your storage.

Bulletproof secure operations

Not a single bit will be moved or deleted unless it's perfectly safe to do so,
as HSM Plus uses atomic and transational algorithms to always ensure the
safety of your data.

Amazon S3 and HTTP storage

Free yourself from the restraints of your local storage and save money
thanks to HSM Plus by storing your data on Amazon S3 buckets and on
selected compatible HTTP storage systems.

Attachment indexing

Several types of attachments are indexed by HSM Plus, deepening your
Zimbra Web Client's search scope to the contents of Microsoft Office
documents, ODF files, compressed archives, PDFs and much more.
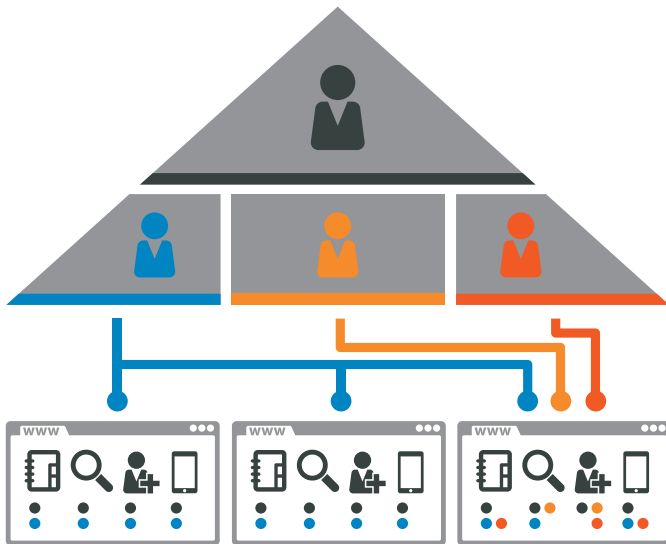

zimbra
ADMIN+
powered by ZEXTRAS

Admin delegation and domain restrictions - You are in control

Admin Plus is your next step in Zimbra Administration.

Grant Delegated Admin rights to users on your server to let them perform any kind of user management task, and set quota, COS and user limits for your domains in order to gracefully handle one of the most delicate tasks of a system administrator: multi-tenancy.

Keep track of your Delegated Admin's actions and your domain status with the reporting features of Admin Plus, straight from your Zimbra Administration Console thanks to the dedicated Administration Zimlet.

Limited delegated admin access

Delegated Admins will access the Zimbra Administration Console just like Global Admins but with a reduced scope that only allows them to see and interact with the elements their role allows.

Activity logging

Keep track of all admin activity thanks to a built-in log search and browse tool. Data for both Delegated and Global Administrators can be queried and viewed straight from the dedicated Administration Zimlet.

Disk quota limits

Set per-domain user quota limits to protect yourself against lavish quota grants and storage space squandering, and be able to better predict and plan your storage expansion policies.
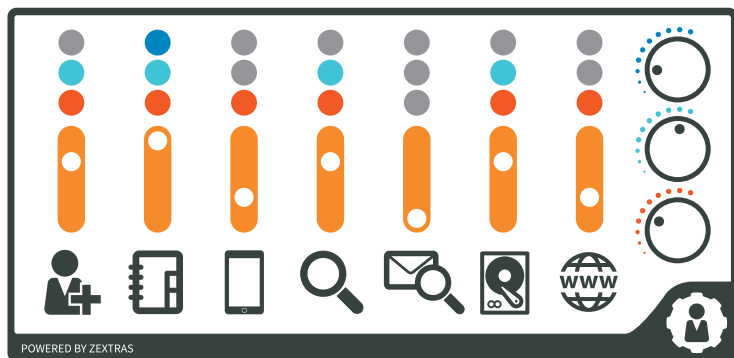

Domain control

Set COS, quota and user limits for your domains, effectively creating impassable boundaries that will help you keep your server under full control.

Admin delegation and multitenancy

Grant "Delegated Admin" rights to one or more users to let them perform user provisioning and management operations for one or more domains, thus relieving Global Administrators from such tasks.

No configuration needed

The Admin Plus module does not need any kind of initial module configuration, so you can start creating your Delegated Admins and setting your Domain Limits out-of-the-box.

Monthly reports

Admin Plus automatically creates a monthly report containing information about admin activity and domain status.
This report is automatically delivered either via email or briefcase

Admin settings reset

Admin Plus provides an "Admin Configuration Reset" feature that will restore any admin-related setting.
This is great if you wish to reset your current configuration or to clean up any leftover settings following a migration.

Inhibit the "View Mail" feature

In order to safeguard your users' privacy, Admin Plus gives you the opportunity to selectively enable or disable the View Mail feature for your Delegated Admins.

100% "Oops" safe

No matter how hard they'll try, Delegated Admins won't be able to edit any Domain, COS, Server or Global settings. They will only be able to see the data they're granted access to and only perform user provisioning/management operations.
